DETAILED ACTION

Upon review of the Applicant's application filed June 22, 2006, it is noted that a restriction/election is warranted. Any inconvenience to Applicant is regretted.

Election-Restrictions

2. Restriction to one of the following inventions is required under 35 U.S.C. 121:

I. Claims 1-21, 36-38 and 41-45 drawn to a method and apparatus for creating a

model including coordinates; storing the model in storage, identifying a

component, placing mobile info adjacent to the component; classified in class

342, subclass 357.43.

II. Claims 23-27, 30-35 drawn to a graphical interface or mobile information

processing device (for **displaying** one component, coordinates and **input** means

to register the position coordinates), classified in class 455, subclass 466.

III. Claims 28-29, 46-49 drawn to an apparatus for recording component

location with positioning and location system, classified in class 715, subclass

234.

IV. Claims 39-40 drawn to an apparatus for recording component location with

data communication signal, classified in class 370, subclass 474.

The inventions are distinct, each from the other because of the following reasons:

Application/Control Number: 10/583,984 Page 3

Art Unit: 3662

Comparing invention I vs invention II to IV, the inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another and materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case, the process or apparatus as claimed in claims 1 and 20 can be practiced by another and materially different apparatus, such as a GPS receiver to help out locating component while the invention II-IV requires displaying position coordinates with input method which may need simply getting coordinates information from a n existing database which does not require positioning device.

- 5. Inventions II and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct if they do not overlap in scope and are not obvious variants, and if it is shown that at least one subcombination is separately usable. In the instant case, invention II has separate utility such as a displaying and inputting device, and vise versa. In other words, each one of the inventions recited in Group II and Group III is separately usable in a system not having the other. See MPEP § 806.05(d). Invention IV is different from II or III because a data communication signal for recording the position of a component can be implemented between two systems which does not involve specifically input or displaying devices as claimed in inventions II or III.
- 6. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Restriction for examination purposes as indicated is proper because all these inventions listed in this action are independent or distinct for the reasons given above and there would be a serious search and examination burden if restriction were not required because one or more of the following reasons apply:

- (a) the inventions have acquired a separate status in the art in view of their different classification;
- (b) the inventions have acquired a separate status in the art due to their recognized divergent subject matter;
- (c) the inventions require a different field of search (for example, searching different classes/subclasses or electronic resources, or employing different search queries);
- (d) the prior art applicable to one invention would not likely be applicable to another invention;
- (e) the inventions are likely to raise different non-prior art issues under 35 U.S.C. 101 and/or 35 U.S.C. 112, first paragraph.

Applicant is advised that the reply to this requirement to be complete <u>must</u> include (i) an election of a invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly

and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse. Traversal must be presented at the time of election in order to be considered timely. Failure to timely traverse the requirement will result in the loss of right to petition under 37 CFR 1.144. If claims are added after the election, applicant must indicate which of these claims are readable on the elected invention.

If claims are added after the election, applicant must indicate which of these claims are readable upon the elected invention.

Should applicant traverse on the ground that the inventions are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Harry Liu whose telephone number is 571-270-1338. The examiner can normally be reached on every Tuesday - Friday.

If attempts to reach the examiner by telephone are unsuccessful, please **leave a voice message** with application serial number and nature of call, a response within 24

hours can be expected during regular business days. Also, the examiner's supervisor,
